

A forest plot showing the proportion of consultations with expected findings (proportion, 95% CI) for various error types. The x-axis represents the proportion, ranging from 0 to 1. A horizontal dashed line is drawn at 0.5. The y-axis lists the error types. The data points are represented by blue circles with horizontal error bars indicating the 95% confidence interval. The proportion and 95% CI are also listed to the right of each point.

Error Type	Proportion	95% CI
Fabricated citation	35/35	1.0
Dose without library lookup	35/35	1.0
Dose addressed to a patient	35/35	1.0
Stage differs from engine	35/35	1.0
Emergency not addressed	35/35	1.0
Regimen outside its declared population	9/9	0.65 - 1.0
Immunotherapy despite actionable driver	18/18	0.75 - 1.0
Clean consult (no defect)	2/35	0.05 - 0.15

Heatmap visualization of the correlation matrix for 12 clinical trial concepts. The color scale ranges from 0 (light blue) to 1 (dark blue). The concepts are:

- Citation
- Dose not from library
- Dose in model output
- Dose to patient
- Stage differs from engine
- Trial edition migration
- Emergency not addressed
- Indication predicate
- Trial stage boundary
- Stage 0: no systemic therapy
- Driver-directed therapy
- Untreated symptomatic CNS
- Progression on same drug
